

100G Air-Cooled Switch from Brazilian Manufacturer

AI Overview

Currently, there is no publicly listed 100G air-cooled switch manufactured in Brazil in the available sources. Most 100G switches, such as the MikroTik CRS504-4XQ-IN or Kontron VX6940, are produced by international companies and offer air-cooled options with multiple 100G QSFP28 ports, low power consumption, and flexible connectivity for high-speed networks . If your goal is to source a Brazilian-made switch, you may consider the following approaches: 1. Contact Local Distributors or Integrators: Brazil has several IT hardware distributors and system integrators who may source or assemble high-speed networking equipment locally. Companies like Positivo Tecnologia or Intelbras sometimes offer networking solutions, though 100G switches are less common domestically. 2. Consider International Air-Cooled 100G Switches: MikroTik CRS504-4XQ-IN: Compact, energy-efficient, four 100G QSFP28 ports, supports breakout to 25G devices, low power consumption (~25W), wall-mountable, and preinstalled OS . Kontron VX6940: 6U VPX switch with 100G uplinks, air-cooled, suitable for high-bandwidth applications like RADAR or SONAR systems . 3. Custom or OEM Solutions: Some Brazilian companies may offer custom assembly or OEM services, where international switch hardware is integrated into locally manufactured chassis or systems. This can meet regulatory or local sourcing requirements while providing 100G performance. 4. Check Specialized Brazilian Suppliers: For niche or industrial applications, contacting suppliers who specialize in telecommunications or defense networking equipment in Brazil may yield options for air-cooled 100G switches. In summary, while a fully Brazilian-manufactured 100G air-cooled switch is not readily available, you can either source international models with air-cooling or explore local integrators for custom or OEM solutions that meet your...
