

Cable and Optical Cable Laying Reel Rack

AI Overview

Cable reel racks provide organized, safe, and efficient storage and deployment solutions for optical cables, ranging from portable modular reels to heavy-duty industrial racks.

Types of Cable Reel Racks

- 1. Modular Advanced Reel Systems (MARS)**
Lightweight, impact-modified polymer construction ideal for harsh environments and field deployment. Features include integrated cable payout areas, stackable reels, connector storage, flip-out handles, and optional fiber optic cleaning kits. Deployment options include A-frames, tripods, bumper mounts, backpacks, and cartridge systems, making them suitable for military, emergency, and tactical applications. Available in various capacities, e.g., 100m to 1000m of fiber optic cable, with low weight for easy transport.
- 2. Industrial Cable Reel Racks**
Heavy-duty steel or powder-coated racks designed for warehouses, manufacturing, and telecom distribution centers. Adjustable beam intervals allow customization for different reel diameters and weights, supporting up to 10,000 lbs per level. Can be configured as stand-alone units or multi-level systems for dense storage and efficient cable dispensing. Axle support brackets and cradle beds ensure safe rotation and retrieval of reels without damaging cables. Suitable for both static storage and dynamic dispensing, optimizing vertical space and improving workflow efficiency.
- 3. Portable and Workshop Cable Reel Racks**
Freestanding stainless steel or plastic racks for smaller operations, workshops, or construction sites. Multi-spool designs allow simultaneous storage and deployment of 1-4 reels, with 360° rotating columns for easy cable pull. Lightweight and easy to assemble or disassemble, ideal for temporary setups or indoor/outdoor use. Protects cables from tangling, wear, and environmental exposure while improving work efficiency.
