

Canadian Certified Air-Cooled Switch 100G

Overview

Developed in alignment with the SOSA™ and CMOSS technical standards, this 3U OpenVPX plug-in card supports data rates up to 100 Gbps and offers dual real-time switching in physically separated enclaves, enhancing security and accelerating certification for sensitive mission systems. FS 100G Switches offer high programmability and scalability, designed for large enterprises and hyper-converged infrastructure (HCI) networks. This transfer switch has an integrated load center to allow for essential circuit backup. Switches with a pilot light indicate when the switch is on. They turn two circuits from on to. The VX6940 is a 6U VPX non-blocking L2/L3 switch built around a Broadcom® 72 × 10GbE port high-density switch with 100G uplinks capability offering 720 Gb of I/O bandwidth. Compliant with VITA65 / SLT6-SWH-14F16U1U15U1J-10. Affordable, compact, energy-efficient 100 Gbps networking. Wherever detection and user warning of a flow rate that is either too high, too low or a no-flow condition is required, the FS10i Flow Switch/Monitor is the solution.
