

# Dimensions of the electrical distribution box for a two-bedroom one-bathroom apartment

## AI Overview

A typical residential electrical distribution box for a two-bedroom, one-bathroom apartment is a 100–150A main breaker panel with dimensions around 14–16 inches wide, 24–30 inches high, and 4–6 inches deep, designed to safely accommodate standard household wiring and devices.

**Recommended Specifications**

**Amperage Rating:** For a small apartment, a 100–150 amp main breaker panel is generally sufficient to handle lighting, outlets, and small appliances, while allowing for future expansion such as air conditioning or EV chargers .

**Physical Dimensions:** Standard residential panels typically measure 14–16 inches in width, 24–30 inches in height, and 4–6 inches in depth. These dimensions provide adequate space for circuit breakers, wiring, and safe heat dissipation .

**Internal Volume and Wire Fill:** The internal volume of the panel must comply with NEC wire-fill requirements to prevent overcrowding. Deeper boxes allow more conductors and easier splicing, which is critical for safety and code compliance .

**Number of Circuits:** A two-bedroom, one-bathroom apartment usually requires 12–20 circuits, including dedicated circuits for kitchen appliances, HVAC, water heater, and general lighting/outlets. Multi-gang panels or panels with additional slots can accommodate future upgrades .

**Mounting and Clearance:** NEC 110.26 requires a minimum working space of 30 inches wide, 36 inches deep, and 6.5 feet high in front of the panel. The panel should be mounted at a height not exceeding 6 feet 7 inches from the floor, with a dedicated clearance zone for safety .

**Enclosure Rating:** For indoor residential use, a NEMA 1 or IP20-rated enclosure is standard. If the panel is installed in a damp or outdoor location, a highe...
