

Domestic Optical Cable Traction Machine

Overview

A properly configured traction machine, like the Optical Cable Traction Machine referenced here, integrates a dual-drum winch system with a digital torque display. This allows operators to set maximum pull limits (e. g, 500N-2000N) based on cable specifications. A cable traction device is a mechanical system designed to pull optical fibers, communication cables, or power lines through conduits, ducts, or aerial pathways with controlled tension and minimal damage. Unlike manual pulling methods that rely on human strength and risk kinking or over-stretching. Fiber Optic Puller used for the construction of fiber optic cable pipelines. It can adapt to the propulsion and recovery of 5-45 optical cables or cable cables. Shop our range of durable, high-performance solutions for various applications.
