

Fiber optic pigtail FCFC 3 meters long

AI Overview

A 3-meter FC-FC fiber optic pigtail in OM3 multimode is available for fusion splicing and high-performance cabling applications.

Product Overview An FC-FC fiber optic pigtail is a short length of fiber optic cable with FC connectors on both ends, typically used for fusion splicing or connecting optical devices in a network. The 3-meter length provides flexibility for installation in racks, panels, or enclosures without excessive slack.

Specifications

- Fiber Type: Multimode OM3 (50/125 μm), suitable for high-speed data transmission and short-distance applications.
- Connector Type: FC on both ends, known for screw-on secure connections and low insertion loss.
- Length: 3 meters, standard for patching and splicing setups.
- Jacket: Typically 900 μm buffered for easy handling and protection during splicing.
- Compatibility: Works with fusion splicing equipment and standard fiber optic panels or devices.

Applications

- Data Centers: Connecting switches, servers, and patch panels.
- Telecommunications: Short-distance multimode fiber links.
- Laboratory or Test Environments: Flexible cabling for experiments or temporary setups.
- Splicing: Ideal for creating custom-length fiber runs by splicing to longer cables.

Availability Several suppliers offer FC-FC 3-meter OM3 pigtails, including options for custom lengths or pre-terminated solutions. They are generally available in stock for immediate purchase and can be ordered online or through distributors.

Key Considerations Ensure the fiber type matches your existing network (OM3 for multimode, OS1/OS2 for singlemode). Verify the connector polish type (UPC or APC) if low back-reflection is critical. For high-density installations, consider color-coded jackets to simplify identification and splicing. This type of pigtail is a reliable and standardized solution for efficient fiber optic cabling, providing low attenuation and secure connections for multimode networks.
