

Fire Retardant Cold Aisle Cabinets at FOB Price

AI Overview

Fire-retardant cold aisle cabinets are modular, energy-efficient solutions designed to isolate hot and cold air in data centers while integrating with fire suppression systems, with FOB pricing available through manufacturers and wholesalers.

Product Features

Cold aisle containment cabinets are designed to improve cooling efficiency and protect IT equipment by separating cold supply air from hot exhaust air. They typically include:

- Modular construction with adjustable heights and widths to fit standard and non-standard rack cabinets ().
- Fire-retardant materials such as polycarbonate panels and aluminium frames, with integrated fire nozzle entry sections or thermal drop-out panels that activate in case of fire ().
- Flexible airflow management, including sliding or hinged doors, open or closed roof panels, and dummy elements to fill unused spaces, ensuring optimal containment and energy efficiency ().
- Seismic and structural support, with stands and frames that accommodate raised floors and non-standard cabinet rows ().

Fire Safety Integration

These cabinets are compatible with existing fire detection and suppression systems. Features include:

- Thermal drop-out panels that automatically release to allow fire suppression gases to enter the aisle ().
- Intelligent fire-safe systems that alert personnel and open ceiling panels to enable rapid fire suppression ().

Compliance

Compliance with data center safety standards, ensuring both personnel and equipment protection.

Energy Efficiency and Cooling

Cold aisle containment reduces hot and cold air mixing, improving cooling efficiency by 20–50% depending on site conditions (). Supports variable aisle widths, rack heights, and depths, allowing for flexible deployment and future expansion (). Closed or open roof designs direct hot air to plenum areas, enhancing energy efficiency in suspended ceiling environment...
