

Household Indoor Waterproof Distribution Box

AI Overview

A household indoor waterproof distribution box is a protective enclosure for electrical circuits, designed to prevent water, dust, and UV damage, typically rated IP65–IP67.

Key Features

- Waterproof and Dustproof Protection:** These boxes are designed with IP65 to IP67 ratings, ensuring protection against dust and water splashes or jets, making them suitable for bathrooms, kitchens, or utility rooms (CAMWAY, CHINT, WPN Series). IP67 models can even withstand temporary immersion in water up to 1 meter.
- Durable Materials:** Most indoor waterproof distribution boxes are made from ABS or polycarbonate plastics, offering shock resistance, UV protection, and flame retardancy. Some models, like the CHINT DB4-Series, are self-extinguishing and non-toxic, ensuring safety in case of fire.
- Internal Configuration:** These boxes often include DIN rails, neutral/earth bars, and prefabricated rail terminals, allowing easy installation of miniature circuit breakers (MCBs), residual current devices (RCDs), and overvoltage protectors. Knock-out entries or cable glands maintain the waterproof seal while accommodating wiring.
- Installation Flexibility:** They can be wall-mounted or surface-mounted, with reinforced brackets and screws for secure attachment. Some models include grid mounting plates for switches or sockets, simplifying setup.
- Sizes and Capacity:** Household boxes come in various sizes, typically supporting 4–18 ways for small to medium electrical circuits. Larger models are available for more complex setups or multi-layer configurations.

Applications

- Indoor wet areas:** Bathrooms, kitchens, laundry rooms
- Utility and service rooms:** Protecting household circuits from moisture
- Small control panels:** Lighting groups, automation, HVAC systems
- Outdoor-adjacent indoor areas:** Near pools or garden-facing walls, provided the box is rated for higher IP prot...
