

How to make cable trays flip up

Overview

The workaround to the problem above, is to first place a cable tray fitting at the correct elevation, even before drawing the cable tray route. Rotating the cable tray elbow will allow you to then specify the orientation. Also, is it possible to place a new cable trays inverted in such a way that the bottom of the cable tray is upside?

I welcome any ideas or suggestions. However, Cable Trays do have certain limitations in that the channel shape can only be set to a horizontal aspect where the bottom edge runs parallel to its supports. In many applications particularly in the infrastructure space, there is a need to be able to rotate the 'C' channel section so that. I created a quick Video below to show you/them how to create vertical cable trays/ladders by means of using MEP Fabrication parts. Sorry, HTML5 Canvas is required. I hope. From now on you can flip tray: With this function you can flip a straight cable tray by 180 degrees. This connection type must be added to existing projects.
