

How to tie cable trays to cable holders

AI Overview

Secure cable trays to holders using appropriate brackets, clamps, and fasteners at recommended intervals to ensure stability, safety, and compliance with electrical codes.

Step-by-Step Guide

1. **Plan the Route and Support Points** Before installation, mark the cable tray path on walls, ceilings, or floors using a chalk line or laser level. Identify where supports (cable holders, brackets, or struts) will be installed, typically spaced 1.5 to 3 meters apart, depending on tray type and load. Include bends, tees, or risers in your plan.
2. **Select the Right Cable Holders and Brackets** Choose holders compatible with your tray type (ladder, perforated, or solid-bottom). Ladder trays often use wall arms or ceiling struts with clamps, while ventilated troughs may require continuous support. Ensure the holders can bear the weight of fully loaded trays.
3. **Install Supports** Secure the cable holders to the mounting surface using anchor bolts, threaded rods, or other fasteners suitable for the material (concrete, steel, or wood). Make sure each holder is level and aligned with the tray path.
4. **Position the Cable Tray** Place the tray onto the holders, ensuring it sits evenly. For long runs, use rollers or temporary supports to prevent sagging during installation.
5. **Tie the Tray to the Holders** Use clamps, U-bolts, or threaded fasteners to attach the tray to the holder. Tighten bolts or screws with a wrench or torque tool to secure the tray firmly without deforming it. For ladder trays, attach at each rung or side rail; for solid-bottom trays, use the designated mounting holes.
6. **Check Alignment and Stability** Ensure the tray is level, straight, and fully supported. Adjust clamps or brackets as needed. Verify that the tray can support the expected cable load without sagging or shifting.
7. **Grounding and Bonding** If required, bond the tray to the electrical grounding system using grounding straps or bonding jumpers to comply with NEC 392.60 and local codes.
8. **Final Inspection** Double-check all fasteners, alignment, and support spacing. Ensure the installation meets safety standards and...
