

Includes 10 Gigabit single-mode fiber optic patch cord

AI Overview

10 Gigabit single-mode fiber optic patch cords are high-speed cables designed for long-distance data transmission, offering low insertion loss and high signal integrity for enterprise and data center networks.

Overview 10 Gigabit single-mode fiber optic patch cords (SMF) are used to connect network devices such as switches, routers, and transceivers over long distances, typically ranging from 10 km to over 80 km depending on the OS2 fiber specification. They are ideal for high-speed applications in data centers, campus networks, and telecommunications where low attenuation and minimal signal loss are critical.

Key Features

- Fiber Type:** Single-mode (OS2) for long-distance transmission.
- Bandwidth:** Supports 10 Gigabit Ethernet and higher-speed networks.
- Connectors:** Common types include LC, SC, ST, FC, MTRJ, and MPO/MTP. LC connectors are widely used for high-density applications.
- Cable Jacket:** Available in 900 μm , 1.6 mm, and 3 mm diameters, with options for OFNR riser, LSZH, or outdoor-rated cables.
- Performance:** High return loss, low insertion loss, and precise fiber alignment ensure reliable signal transmission.
- Durability:** Designed for bending resistance, high toughness, and long-term reliability.

Applications

- Data Centers:** Connecting servers, switches, and storage devices.
- Campus Networks:** Long-distance links between buildings.
- Telecommunications:** High-speed backbone connections.
- High-Performance Computing (HPC) and AI:** Ensures low-latency, high-bandwidth connectivity.

Selection Tips

- Match Fiber Type to Equipment:** Single-mode fibers operate at 1310 nm or 1550 nm, while multimode fibers use 850 nm. Mixing types can cause signal loss or failure.
- Connector Compatibility:** Ensure the patch cord connectors match the transceiver ports (e.g., LC to LC, SC to SC).
- Cable Length:** Choose lengths appropriate for your installation to minimize excess slack and signal...
