

Installation of PVC cable tray type

AI Overview

PVC cable trays should be installed with proper planning, support spacing, and environmental considerations to ensure durability, safety, and efficient cable management.

Planning and Route Design Before installation, plan the cable tray route carefully. Mark the path based on your electrical design and site layout, considering clearance, load capacity, and separation from other services like water, gas, or HVAC ducts. Ensure a minimum vertical distance of 30 cm between multiple layers of trays to prevent interference between electrical and telecommunication signals. Avoid running PVC trays under other types of pipelines to maintain ventilation and safety.

Material and Environmental Considerations PVC trays are ideal for wet, salty, or chemically aggressive environments due to their corrosion resistance and UV stability. They are suitable for outdoor installations and areas with high humidity, such as docks, coastal regions, or industrial plants. Ensure the trays are rated for the expected load and environmental conditions.

Support and Mounting Use appropriate brackets, clamps, and supports for wall, ceiling, or floor mounting. Supports should typically be spaced 1.5 to 3 meters apart, depending on tray type and load. For multiple layers, maintain proper vertical separation and ensure the trays are level and aligned. PVC trays should be handled carefully to avoid cracks or damage during installation.

Installation Steps

- Check Shop Drawings:** Verify approved drawings for tray dimensions, route, support system, and number of layers.
- Mark and Prepare Route:** Mark the tray path on walls, ceilings, or floors, ensuring no clashes with other services.
- Install Supports:** Fix brackets or hangers at the recommended intervals, ensuring they are level and secure.
- Lay Trays:** Place PVC trays on the supports, connecting sections with appropriate fittings. Ensure straight alignment and proper leveling.
- Cable Laying:** Organize cables neatly using ties or straps, separating by voltage and function. Leave slack for expansion or future adjustments.
- Final Checks...**
