

Installation price of electrical distribution box for small apartment

AI Overview

A small electrical distribution box for an apartment typically costs between \$50 and \$250 for materials and installation, depending on size, material, and labor.

Material Costs For a basic single-gang or small interior box, prices generally range from \$0.50 to \$8 per box for standard plastic or metal boxes. Plastic boxes are cheaper, while metal boxes or specialized boxes (tamper-resistant, GFCI-compatible, or deeper for wiring) cost more. For slightly larger small panels, such as a 100A, 8-circuit panel, materials alone can cost around \$250.

Labor and Installation Labor is a significant portion of the total cost. Installing a small interior box typically takes 1–5 hours, depending on complexity and local rates. Hourly rates vary from \$40–\$150 per hour, with higher rates in urban areas. For a basic small box, total labor plus materials can range from \$40 to \$160, while a mid-range small panel with more circuits or minor upgrades may cost \$1,100–\$1,600 including permits and labor.

Factors Affecting Cost

- Box type and size:** Single-gang vs multi-gang or small distribution panels.
- Material:** Plastic is cheaper; metal offers durability and fire resistance.
- Location:** Indoor boxes are less expensive than outdoor or weatherproof boxes.
- Amperage and circuits:** Higher amperage panels or more circuits increase cost.
- Labor and permits:** Local labor rates and permit requirements can significantly affect total cost.
- Additional features:** GFCI compatibility, tamper resistance, or deeper boxes for wiring add to the price.

Typical Scenarios

- Basic small interior box:** Single-gang plastic, minimal wiring, total cost \$40–\$140.
- Mid-range small panel:** Metal 2-gang or 100A, 8–12 circuits, total cost \$1,100–\$1,600 including labor and permits.
- Premium or outdoor small panel:** Weatherproof, multiple devices, total cost \$225–\$540 for materials and labor.

In summary, for a standard apartment, a small...
