

MCC type distribution box

Overview

Mini Center Compact is a reliable range of distribution boards allowing maximum flexibility, offering wide choice of incomers: Switch Disconnecter, MCCB, MCB, RCCB, RCD or Direct Cable Connection. The busbar design eliminates risk of hot spots. You will learn how to identify various components of a MCC and the difference between the various classifications and types of motor control center wiring. An MCC panel is one of the most important systems used to control electric motors safely and efficiently in industrial environments. Motor control centers. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices.
