

Malta cable tray types

AI Overview

In Malta, cable trays are available in various types including perforated, non-perforated, and tubular metal trays, designed for efficient cable management in industrial, commercial, and residential settings.

Common Cable Tray Types

- 1. Perforated Cable Trays** These trays have holes along the base and sides, allowing for ventilation, heat dissipation, and easy cable fastening using ties. They are typically made of galvanized steel and are suitable for both power and low-voltage wiring.
- 2. Non-Perforated (Solid) Cable Trays** Solid trays provide maximum protection against dust, moisture, and mechanical damage. They are ideal for environments where cables need to be shielded from external elements.
- 3. Tubular or Round Section Trays** These trays feature a tubular lock design with rounded edges, enhancing structural strength and safety during installation. They are often used in complex routing systems and can be divided into compartments for separating power and data cables.
- 4. Cable Baskets** Cable baskets are open wire trays that allow for flexible routing and easy access to cables. They are lightweight and commonly used in offices and commercial buildings.

Accessories and Mounting Options Cable trays in Malta come with a full range of accessories including:
Horizontal and vertical bends for changing direction
T- and X-type joints for branching
Covers and baffles for protection and compartmentalization
Wall and ceiling pendant fittings for secure mounting.
