

Mesh cable tray in stock sizes

AI Overview

Mesh cable trays are available in a range of widths, depths, side heights, and wire diameters, with specifications varying by manufacturer and material type. Standard Mesh Cable Tray Dimensions Width and Depth: Mesh cable trays typically come in widths ranging from 50 mm to 600 mm and depths from 35 mm to 105 mm, depending on the system and load requirements (OBO Bettermann GR-Magic® trays offer side heights of 35, 55, and 105 mm) . Depth is often referred to as side height, which affects cable containment and ventilation. Wire Diameter / Thickness: Wire mesh trays are constructed from electro-welded steel wires, with diameters generally between 3 mm and 6 mm, depending on load capacity and tray width. The wire spacing is designed to allow ventilation while maintaining structural integrity . Material and Finish: Common materials include electro-galvanized steel, hot-dip galvanized steel, and stainless steel. Finishes may include “Titan look” electro-galvanized, hot-dip galvanized, or stainless steel for corrosion resistance and fire safety compliance . Length: Standard straight sections are usually 2 meters or 3 meters, though custom lengths can be fabricated. Bends, tees, crosses, and transitions are engineered to match straight section dimensions . Load and Compliance Considerations Load Capacity: Determined by wire diameter, tray width, and support spacing. Wider trays or heavier cable loads require thicker wires or closer support intervals . Standards Compliance: Mesh cable trays are designed to meet NEC, NEMA, IEC/EN 61537, VDE 0639, and in some cases, NEMA fire safety requirements. They can also serve as protective conductors in certain installations . Temperature Range: Most mesh trays operate safely between -20°C and +120°C, with material selection affecting performance in extreme conditions . Accessories and Fittings Mesh cable tray systems include a full range of accessories to complete installations: Horizontal and vertical bends, tees, crosses, dropouts, and transitions C...
