

Parameter settings for intelligent meters in power distribution cabinets

Overview

From the meter front panel – Use the meter's front panel or remote display to change basic power meter settings such as Volts Mode, PT and CT primary and secondary ratings, as well as communications settings such as unit ID, baud rate, protocol or webpage configuration. Choose Monitoring > Meter > Running Param. Select DL/T645-2007 or DL/T645-1997 based on the protocol version of the meter. Set this. Log in as Advanced User or Special User, set access parameters, and click Add Devices. Set this parameter to the communication address of the power.
