

What does 22u mean in an outdoor network cabinet

AI Overview

"22U" refers to a cabinet with 22 rack units of vertical mounting space, where one rack unit (1U) equals 1.75 inches (44.45 mm). Definition and Dimensions In network and telecom cabinets, the "U" stands for rack unit, a standardized vertical measurement used globally for mounting IT and networking equipment. One U equals 1.75 inches (44.45 mm), so a 22U cabinet provides 38.5 inches (97.8 cm) of usable vertical space for mounting devices such as switches, patch panels, and servers. This measurement refers to the internal mounting height, not the total external height of the cabinet, which may include casters, ventilation zones, and structural components. Outdoor Cabinet Features Outdoor 22U cabinets are designed to protect equipment from environmental factors. For example, IP65-rated cabinets provide dust and water ingress protection, welded corrosion-resistant construction, and insulated double-layer walls. They often include ventilation systems, filtered air intakes, and fan modules to maintain proper airflow and prevent overheating. Doors and panels may have locking mechanisms for security, and mounting rails are marked with U-identification for precise equipment placement. Practical Considerations Equipment Compatibility: 22U cabinets are compatible with standard 19-inch rack-mount equipment, and some models also support 23-inch devices. Load Capacity: Outdoor 22U cabinets can support significant weight, often up to 500–800 kg, depending on the model. Installation Flexibility: Many cabinets allow for adjustable vertical rails, removable side panels, and optional casters for easier installation and maintenance. Environmental Protection: Outdoor cabinets are tested for anti-vandalism, IP protection, and temperature control, making them suitable for harsh environments like open fields, industrial sites, or telecom towers. In summar...
