

# What router is needed for a 600 Mbps fiber optic connection

## Overview

Our top overall pick is the Netgear Nighthawk RS700S, a Wi-Fi 7 router built for multi-gig fiber plans that handles up to 200 devices across 3,500 square feet. For budget-conscious households, the TP-Link Archer AX55 delivers reliable Wi-Fi 6 performance without the premium price. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. The best router for fiber internet is one that matches your plan speed, home size, and how you use your connection. I worked with the Cybernews research team to review and compare different routers and give. The solution is simple: invest in a fiber-compatible router. Instead, you simply plug a wireless router into the ONT provided by your ISP, set it up, and start using the internet. Regardless of who your internet provider. Popular internet service providers (ISPs) such as Cox, Spectrum, Xfinity, and fiber-optic providers like AT&T offer faster Internet speeds for expansive home WiFi networks.
